

Recognising and Responding to Deterioration in Care Home Residents through Restore2mini, vital signs and structured communication

Module 1 and Module 2 and two sessions of Module 3 training have already been delivered, however the sessions will be available via a video and within the workbook

Module 3 date - 8th September at 1pm

Virtual training session via Zoom – log in details will be provided once registered.

To book a place on the 8th September at 1pm please contact Bradford & Craven CCG:
Lauren.Ward@bradford.nhs.net

Ask the Team - General Discussion & Feedback sessions: via Zoom: 11th September at 1pm and 15th September at 3pm

Are you a care worker from a care home in Bradford & Craven? This course is for YOU!

As part of the Care@Home offer to support people living with frailty in care homes with escalating needs during Covid -19 and beyond, Bradford District & Craven CCG and partners would like to embed a recognised consistent approach across the whole system to support care providers to recognize and respond to deterioration and support residents to get the right care, at the right time in the right place for the right outcome.

Each training module will last approximately 60 minutes and we will provide you with a workbook which will include other useful information.

Registered nurses and home managers are encouraged to attend to become familiar with the tools and information being shared so you can support colleagues to implement the learning.

Module 1: Using Soft Signs to recognise deterioration

Module 2: Measuring vital signs

Module 3: Keeping residents safe through good communication & teamwork

We will cover:

- Why residents deteriorate.
- The key role carers play in early identification.
- How to recognise the soft signs of deterioration (using RESTORE2 Mini) and what to do if a resident becomes unwell.
- Practical guidance on measuring other vital signs such as Pulse, Temperature, Blood Glucose and their clinical significance.
- How to communicate effectively with the ambulance service, hospital, GPs and community teams.
- The importance of understanding how your team works together and how to improve on this.

At the end of the course you will have the tools and skills to start to implement these ideas in your care homes with your colleagues.
