## How to Assess Residents' Posture (the HARP project)

Example question from the 'postural assessment tool'

- We are a small team of physiotherapists and researchers based at Bradford Royal Infirmary.
- We have designed a new and simple way of assessing residents' posture, using a 'postural assessment tool'.
- We hope that this will help researchers and care staff to improve sitting positions, which may improve residents' comfort.
- At homes that take part in this research we would like to ask around 25-30 residents aged 65+ and two carers to help us try out our new postural assessment tool.
- We will not need to come in to your home - all contact with staff and residents will be remote, using Zoom (or similar).
- Funding is available to cover staff time spent on the project.
- If you are interested and would like to know more, please contact the study researchers:
